Spectrum Paint  
(Elastomeric)

**Description:** Spectrum Elastomeric Paint is used as a weather resistant wall coating that is available in 30 standard colors. AHI also has the ability to make Custom tints to match existing stucco color inspirations by our trained experts.

**Uses:** Used as an interior or exterior decorative coating over sheetrock, wood based-sheathings, metal and any cementitious surface such as stucco, block, poured concrete and masonry surfaces.

**Coverage:** Spectrum Elastomeric Paint will cover 225 to 300 sq. ft. per 5 gallon pail for a two coat application at 12 mils thick wet application. This coating is applied in two or more very thick coats for complete hide and color uniformity. Coverage also depends on surface texture, porosity and application method.

**Dry Time:** Allow 4 hours to touch, 24 hours to recoat. Actual dry time will depend on surface temperatures, humidity and porosity of material being painted.

**Job Conditions:** Air and substrate surface temperature must be 40ºF or higher and remain so for a minimum of 24 hours. Also, protect work from rain for at least 24 hours.

**Precautions:** Use adequate ventilation. Keep away from small children. Harmful if swallowed. Contact physician or poison control office if ingested. Dispose of in accordance with local, state and federal laws.

**Surface Preparation:** Clean area and remove all dust, grease, oil, paint, dirt, efflorescence and any unsound concrete. Spectrum tintable primer must be applied over all cementitious products once they have been allowed to cure. Primer must be applied with a spray application and then back rolled with a paint roller. With a pH pencil, check the surface pH levels 4-6 hours after the primer has dried. Dry time will depend on surface temperatures, humidity and porosity of material to be coated. Randomly check entire surface to ensure pH levels are below 10.

**Light reflectivity:** Spectrum Coatings use high quality pigments to tint the finish coatings. Ultra-violet and sunshine exposure can and will cause fading issues over time. To help minimize fading, light colors should be selected. Light reflectance values are rated 100% white - 0% black. The higher the lightness value, the less fading occurs. Dark colors (light reflectivity less than 20) will fade more rapidly than light colors. Spectrum Acrylic coatings have more protection against ultra-violet, sunshine and weather than elastomeric coatings.

**Mixing:** Mix for 5 minutes before application with paint stirrer.

**Application:** Apply with brush, roller or sprayer to desired coverage or thickness.

**Clean Up:** Clean tools and equipment with water immediately after use.

**Storage & Shelf Life:** Store off the ground in a dry area. Protect from extreme heat, moisture, direct sunlight and freezing temperatures. Product can be stored for a period of 12 months in original un-opened container and protected from moisture. After opening, Spectrum Paint will keep for several weeks if stored and resealed properly.
**Packaging:** Packaged in 5 gallon pails, 36 pails per pallet.

**DO NOT USE THIS PRODUCT AS A COMPONENT OF AN EXTERIOR INSULATION FINISH SYSTEM (EIFS) OR AS PART OF ANY EXTERIOR INSULATION FINISH APPLICATION REPRESENTED TO BE A SIMILAR GROUP COMPONENT BASED SYSTEM.**

EIFS refers to an exterior insulation system in which the specific components are designed, formulated, tested and may also be certified by “EIMA”, “ICBO” or other organization to ensure that the individual components are compatible with one and another and will successfully function together. All AHI products are sold independently and separately and have not been tested, designed, formulated, manufactured or certified by any entity to work together successfully in Exterior Insulation Finish Systems or as a part of any exterior insulation application represented to be similar group component based system

**Warranty:** All Spectrum stucco coatings come with a limited 5 year warranty.
