Project:

Straight Angle Iron or Arched Angle Iron or Arched Plates

Product information:
These products are sometimes referred as steel lintels and they conform to ASTM A-36. Our company has been successfully fabricating and providing these products throughout this part of the country since 1982. Most often these angle iron products are used to support brick or stone over window & door openings. We also have a very broad capability to fabricate "**arched lintels and/or arched plates**" to support brick or stone over arched windows or other openings.

AHI supplies these products with two main types of coatings: (1) Our primed angle iron has an oil based metal primer applied to it that offers some corrosion resistance. (2) **Our hot dipped galvanized angle iron or arched plates offers superior corrosion protection.**

AHI also has the capability to perform **many** types of fabrication in conjunction with these items. Should you need information on this ASTM specification, samples of these products, references or if we may be of service to you in any way, please let us know.

Thank you for the opportunity of furnishing this quality product on your important project!
